Page 7: In regard to the section: Stabilizers

Stabilizers – Two (2) main, radial type outriggers, integral with mainframe and sub-frame shall be provided with pivoting feet, and located in the area of the unit pedestal. Minimum outrigger spread shall be 156” with minimum ground penetration of 12”.

Questions and Answers:

1. Are “A” frames acceptable?
A frame option would not be in our best interest in the Digger Derrick version.

Comments:

Vendors may use the Exception/Variation Form Page 23 of the RFB Package to identify exceptions/variations to our minimum specifications.
